DESCRIPTION

AE4704 is a high performance radome antenna designed for Australia's harsh conditions and the extreme 4WD hobbyist. The antenna base is equipped with a coaxial termination embedded in its screw to fit spring, allowing a different whip to be installed on the same spring for varying terrains, needs and weather conditions (additional whips not included).

Comes with a protective cover (for when whip is not installed), a 4.5m coaxial cable and a PL259 connector.

FEATURES

- Heavy duty white fibreglass radome antenna
- Stainless steel heavy duty barrel spring
- Base allows for interchangeable antenna whips
- 2.1 dBi, ground independant antenna

Comprises
